

Exclusively for Diamond and DermaRadiance Microdermabrasion Systems

# Flower Grains - Flower Peel

Create A New Microdermabrasion Experience

Rejuvenating Rose

Soothing Lavender

Calming Tea Tree

Welcome to the Flower Peel Experience. We now offer three exquisite Flower Grain Formulas for you to introduce to your clients: **Rose, Lavender, and Tea Tree**. Made totally from nature, (pulverized plants) they treat new skin while exfoliating away the old. Flower Grains are environmentally friendly, contain micronutrients and work to maintain the pH balance of skin.

This soft substance **exfoliates using a polishing action** rather than ablating or abrading... (think of polishing a car surface.. no scratches but a beautiful new shine). Flower Grains provide microdermabrasion benefits that only the Flower Peel can offer. Here are just a few:

1. You can increase the number of passes over focused areas for greater dermal collagen stimulation without over irritating the surface skin. This is an excellent approach for sensitive skins and those with pigmentation tendencies.
2. The plant ingredients work to seal the skin surface to protect it from dryness immediately after treatments.
3. The micronutrients and beneficial properties of the flowers help deliver a healthy glow to the skin and provide hydrating/healing emollients. The breakthrough Tea Tree formula delivers anti-acne/anti bacterial benefits deep into the pores for powerful skin correction therapy.
4. When combining both medias (traditional diamond crystals and flower grains) you produce a cut and polish effect for an extraordinary microdermabrasion treatment.

Take advantage of this expansive approach by adding Flower Peel Grains to your treatments. It can be an **extra "add-on" to increase revenue as well**. It's a great marketing plus and your clients will definitely notice the difference.
